

# Website

## Deliverables

- ✓ Desktop design (1366 x 768px)
- ✓ Mobile design (375 x 812 px)

### File formats

Upload the files for 1 page only.  
This will expectedly be the homepage,  
but this is for the client to decide.

\* If applicable

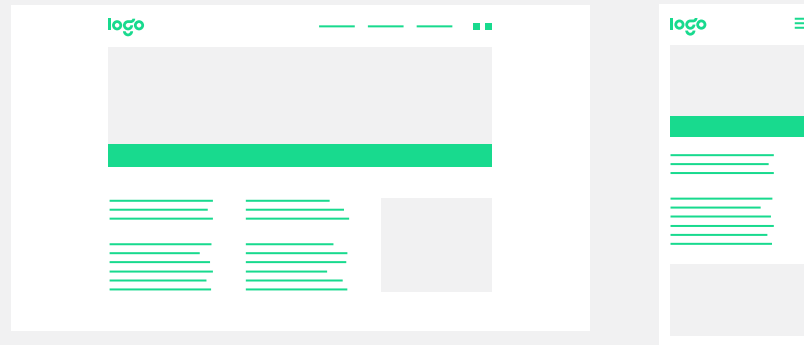

Create a clean file and make sure that the font used is a webfont.

When images/pictures, illustrations (.svg), and/or icons (.svg) are used in the design, make sure you upload these files separately. Ensure that the images/pictures (.jpg or .png files) have the right resolution and color profile.

Depending on the client's requests, exceptions can be made to these file types. However, please ensure that the files you are sending in are clean, clear, and relevant.

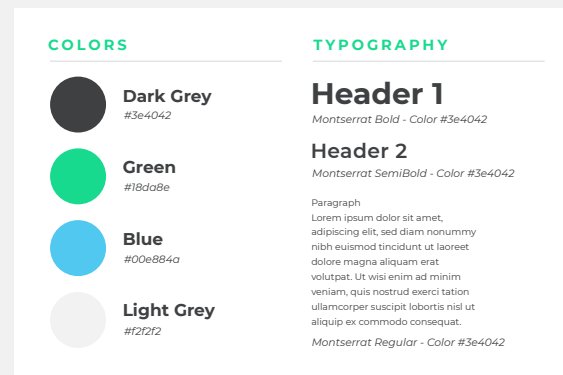

## Illustrator file

## Info file

EXAMPLE

**Important:** DesignBro expects you to deliver the design for 1 page only. Therefore, if the client were to ask you for extra sections, please contact the DesignBro team. More sections will likely lead to a higher price for the client, which also means a greater pay-out for you.

“Digital design is like painting, except the paint never dries.”

- Neville Brody

Whenever (paid) stock photos are being used in the design, be sure to supply the client with a link to the image they have to purchase. **(Note: you should never purchase the image yourself)**

Create a separate file that explains which fonts and colors are being used in the design. This way, the client's web developer can have access to all the files needed to build the website.
